2014 Physician Quality Reporting System Qualified Clinical Data Registries

CMS is pleased to announce the Qualified Clinical Data Registries (QCDRs) that will be able to report quality measure data to CMS, on behalf of individual eligible professionals (EPs) for the 2014 Physician Quality Reporting System (PQRS) program year. These entities have self-nominated and indicated that they meet the requirements as outlined by CMS in the 2014 Physician Fee Schedule (PFS) final rule. In addition to PQRS, the data submitted by QCDRs may also be used by the Value-based Payment Modifier and EHR Incentive Program. QCDRs must be considered Certified Electronic Health Record Technology (CEHRT) to allow their EPs to receive credit for the Clinical Quality Measure (CQM) component of Meaningful Use (MU) for the EHR Incentive Program.

In the table below, each of the 2014 QCDRs has provided detailed information regarding the measures they support, the services they offer their clients, and the costs incurred by their clients. The QCDRs must support at least 9 measures covering 3 National Quality Strategy (NQS) domains and at least 1 outcome measure for at least 50 percent of an eligible professional’s (EPs) patients. Additional information, including QCDR reporting details and the steps an EP should take in selecting a QCDR can be found in the 2014 PQRS: QCDR Participation Made Simple in the Qualified Clinical Data Registry Reporting section at http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Qualified-Clinical-Data-Registry-Reporting.html. EPs wishing to participate in 2014 PQRS through a QCDR, may contact the entities listed below for additional details.

Disclaimer: Each QCDR has reviewed their organization’s information below and provided confirmation of accuracy. Information included in this document was accurate at the time posting; however CMS cannot guarantee that these services will be available or that the QCDR will be successful uploading their files during the submission period. CMS cannot guarantee an eligible professionals success in providing data for the program. Successful submission is contingent upon following the PQRS program requirements, timeliness, quality, and accuracy of the eligible professionals data provided for reporting, and the timeliness, quality, and accuracy of the XML programming of the QCDR.

• Performance aggregation at the practice and organization level available |
QCDRs, using Certified Electronic Health Record Technology (CEHRT) that meets all of the certification criteria required for eCQMs as required under the EHR Incentive Program, may submit eCQM data for the purposes of meeting the eCQM reporting component for the EHR Incentive Program. The product or module must be CEHRT for the eligible professional to satisfy the eCQM component of meaningful use.

The 2014 Physician Quality Reporting System (PQRS) Measure Specifications Manual for Claims and Registry Reporting of Individual Measures must be used to report individual measures. Measures group only measures are the measures within a measures group that do not have a correlating individual measure within the individual measures. The 2014 Physician Quality Reporting System (PQRS) Measures Groups Specifications Manual must be used for these measures group only measures.

The Group Practice Reporting Option (GPRO)/Accountable Care Organizations (ACO) Web Interface Narrative Measures are the measures defined for the web interface reporting option for GPROs and ACOs. The 2014 GPRO/ACO Web Interface Narrative Measure Specifications must be used for these GPRO/ACO web interface measures. Please note that GPRO’s and ACOs who have select the web interface reporting option must report through the web interface and not a QCDR. While QCDRs are able to support the GPRO Web Interface Measures, they are NOT able to submit on behalf of a GPRO or ACO for the 2014 program year.

Only the Electronic Clinical Quality Measures (eCQMs) are able to be utilized for the EHR Incentive Program. The June 2013 version of the eCQMs must be used when supporting the EHR Incentive Program. *Please note that a substantive error which would result in a, erroneous zero percent performance rate when reported was found in the June 2013 version of CMS140v2, Breast Cancer Hormonal Therapy for Stage IC-IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer (NQF 0387). CMS will require the use of the prior, December 2012 version of this measure, which is CMS140v1.

Some of the 2014 QCDRs are in the process of publishing their non-PQRS measures. For these QCDRs, a TBD will display in the Non-PQRS Measures Information column. This document will be updated and reposted once all of the non-PQRS measure publications are finalized.
